DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsuura (5,615,318).

Regarding Claims 1, 5, and 9, Matsuura teaches a coordinate input apparatus and a control method and a computer-readable memory which detects three-dimensional position coordinates of an indicating tool used in combination with a display (40 in fig.3) for displaying a window based on two-dimensional coordinates (Summary; Figures 1-3; col.6, lines 7-45) , comprising: storage means (FDD as 90 in fig.3) for storing a set of coordinate values of a plurality of points for defining a coordinate input area in an arbitrary space (fig.3; col.8, lines 1-13); determination means (Image processing means as 1300 in fig.1) for determining whether a three-dimensional coordinate value as position coordinates of the indicating tool belongs to the coordinate input area defined by the set of coordinate values stored in said storage means (figs.1-3; col.6, line 7- col.7, line 6); and conversion means (calculation means

as 200 in fig.1) for converting the three-dimensional coordinates of the indicating tool into a two-dimensional coordinate value corresponding to the display window on the basis of the determination result obtained by said determination means (figs.1-3; col.6, line 7- col.7, line 6).

Regarding Claims 2, 6, Matsuura teaches the storage means stores a set of coordinate values of a plurality of points for defining each coordinate area for each of a plurality of types of coordinate input areas (figs.1-3; col.6, line 7- col.7, line 6).

4.

Regarding Claims 3, 7, Matsuura teaches the storage means further stores switch information indicating coordinate input operation of the indicating tool for each of the coordinate input areas (figs.1-3; col.6, line 7- col.7, line 6).

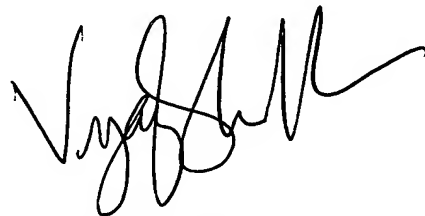

Regarding Claims 4, 8, Matsuura teaches the storage means further stores a definition table for defining operation of executing predetermined processing corresponding to operation of a mouse with respect to a plurality of switches of the coordinate input area and the indicating tool (figs.1-3; col.6, line 7- col.7, line 6)..

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ogura et al teaches the 2-D. and 3-D Coordinate input device.
